

Free Training: Mold Inspection & Radon Gas Measurement!

- ❖ Virtual Online Mold Inspection & Radon Gas Measurement Courses
- ❖ Add these valuable services to your Home Inspection business or to simply learn about these hazards to help keep your family safe.

Radon Course Description

Radon Measurement Training Course | Over 16 Hours

The Radon Measurement Professional Initial Training Course provides the foundational knowledge and practical skills necessary to perform accurate and compliant radon measurements. Over 16 hours of instruction, learners will explore the science of radon, industry standards, measurement devices, quality assurance, and data interpretation. This course prepares participants to meet NRPP and state-specific requirements for certification and equips them with the confidence to conduct reliable measurements that protect public health and safety.

Mold Course Description

Mold Inspection Training Course | 16 Hours

This course provides an introduction to mold inspection, prevention, and remediation practices, based on the U.S. Environmental Protection Agency's voluntary March 2001 guidance *Mold Remediation in Schools and Commercial Buildings*

Learners will gain a foundational understanding of mold growth, health risks, inspection techniques, sampling protocols, and professional reporting. While the course follows EPA recommendations, it also incorporates industry best practices to prepare inspectors for real-world field conditions.

This course provides educational guidance only and is not intended to replace local, state, or federal requirements. EPA, OSHA, and CDC do not regulate mold or mold spores in the air. The information presented is applicable to damage caused by *clean water*, not flood water.

**—Tuition of \$500 for these courses is 100% paid for by the ICD.
